

# Code Review

17-356/17-766

Software Engineering for Startups

<https://cmu-17-356.github.io>

Andrew Begel and Fraser Brown

# Admin

- HW3 due tonight
- HW4 released tonight
- Survey at the end of class
- Continue to work on P1

# Code Review

- Does this code do what it claims?
  - Are there any programming bugs?
- Does this code clearly “explain” what it does?
- Why are we making this change?
  - Are there any design bugs?

# Expectations and Outcomes

# Code Review at Microsoft

Bacchelli, Alberto and Christian Bird. "Expectations, outcomes, and challenges of modern code review." Proceedings of the 2013 International Conference on Software Engineering. IEEE Press, 2013.

# Outcomes (Analyzing Reviews)

# Outcomes (Analyzing Reviews)

# Code Review at Google

- **Introduced to “force developers to write code that other developers could understand”**
- Three benefits:
  - checking the consistency of style and design
  - ensuring adequate tests
  - improving security by making sure no single developer could commit arbitrary code without oversight

Caitlin Sadowski, Emma Söderberg, Luke Church, Michal Sipko, and Alberto Bacchelli. 2018. Modern Code Review: A Case Study at Google. International Conference on Software Engineering

# Mismatch of Expectations and Outcomes

- Low quality of code reviews
  - Reviewers look for easy errors, as formatting issues
  - Miss serious errors
- Understanding is the main challenge
  - Understanding the reason for a change
  - Understanding the code and its context
  - Feedback channels to ask questions often needed
- No quality assurance on the outcome

# What is frustrating about code review?

# Code Review Principles (starting point)

- Start with the “big ideas”
- Automate the little things
- Focus on understanding
- Remember a person wrote the code
- Don't overwhelm the person with feedback

# 3 Pillars of Social Interaction

- Humility
  - You are not the center of the universe (nor is your code!). You're neither omniscient, nor infallible. You are open to self-improvement.
- Respect
  - You genuinely care about the others you work with. You treat them kindly and appreciate their abilities and accomplishments.
- Trust
  - You believe others are competent and will do the right thing, and when appropriate, you are OK with letting them drive.

# Code Review Principles (starting point)

- Start with the “big ideas”
- Automate the little things
- Focus on understanding
- Remember a person wrote the code
- Don't overwhelm the person with feedback

With your teams, for your projects: what are high-level best practices you care about? What can you automate?

# Checklists help manage complex processes

OFFICIAL A.A.F. PILOT'S CHECK LIST	
B-17 AND B-24	
For detailed instructions see Pilot's Handbook 400-21-2000-1 or 400-21-2000-2 as they vary.	
PILOT	CO-PILOT
BEFORE STARTING

...

```
1 + const Account = function(name, nickname, date) {
2 +   this.name = name;
3 +     this.nickname = nickname;
4 +     this.date = date;
5 + }
6 +
7 + function makeDefaultAccount() {
8 +   return {
9 +     name: "Default",
10 +    nickname: "Default",
11 +    date: "Jan 1 2025"
12 +  }
13 + }
14 +
15 + function updateAccount(account, nickname) {
16 +   account.nickname = nickname;
17 + }
```

That was an easy one.

Think for a few minutes about things that have tripped you up in the past.

What do you keep an eye out for now?

# Sample Low-Level Coding Checklist

- General
  - Are all changes relevant?
  - Do the classes and methods fulfill their purpose?
  - Are the messages and texts for the user correct?
- Classes
  - Are all assignments of attributes correct?
  - Are the classes implemented correctly?
- Methods
  - Do methods always return a valid value?
  - Do methods check parameters for validity (if needed)?
  - Are all parameters used?
- Arguments
  - Are the correct arguments used in all method calls?
- Variables
  - Are all variables, counters, and accumulators initialized properly and, if necessary, re-initialized every time they are used?
  - Are all declared variables being used?
- If-Then Statements
  - Do the if-else statements fit the intended purpose?
  - Are all edge cases handled?
- Loops
  - Do the loops end under all possible conditions?
  - Are the break and continue statements used properly?
- Recursion
  - Does recursion terminate properly?
- Errors
  - Are exceptions handled correctly?
- Final Check
  - Are all changes consistent with one another?
